

EVOLUTION COMIC

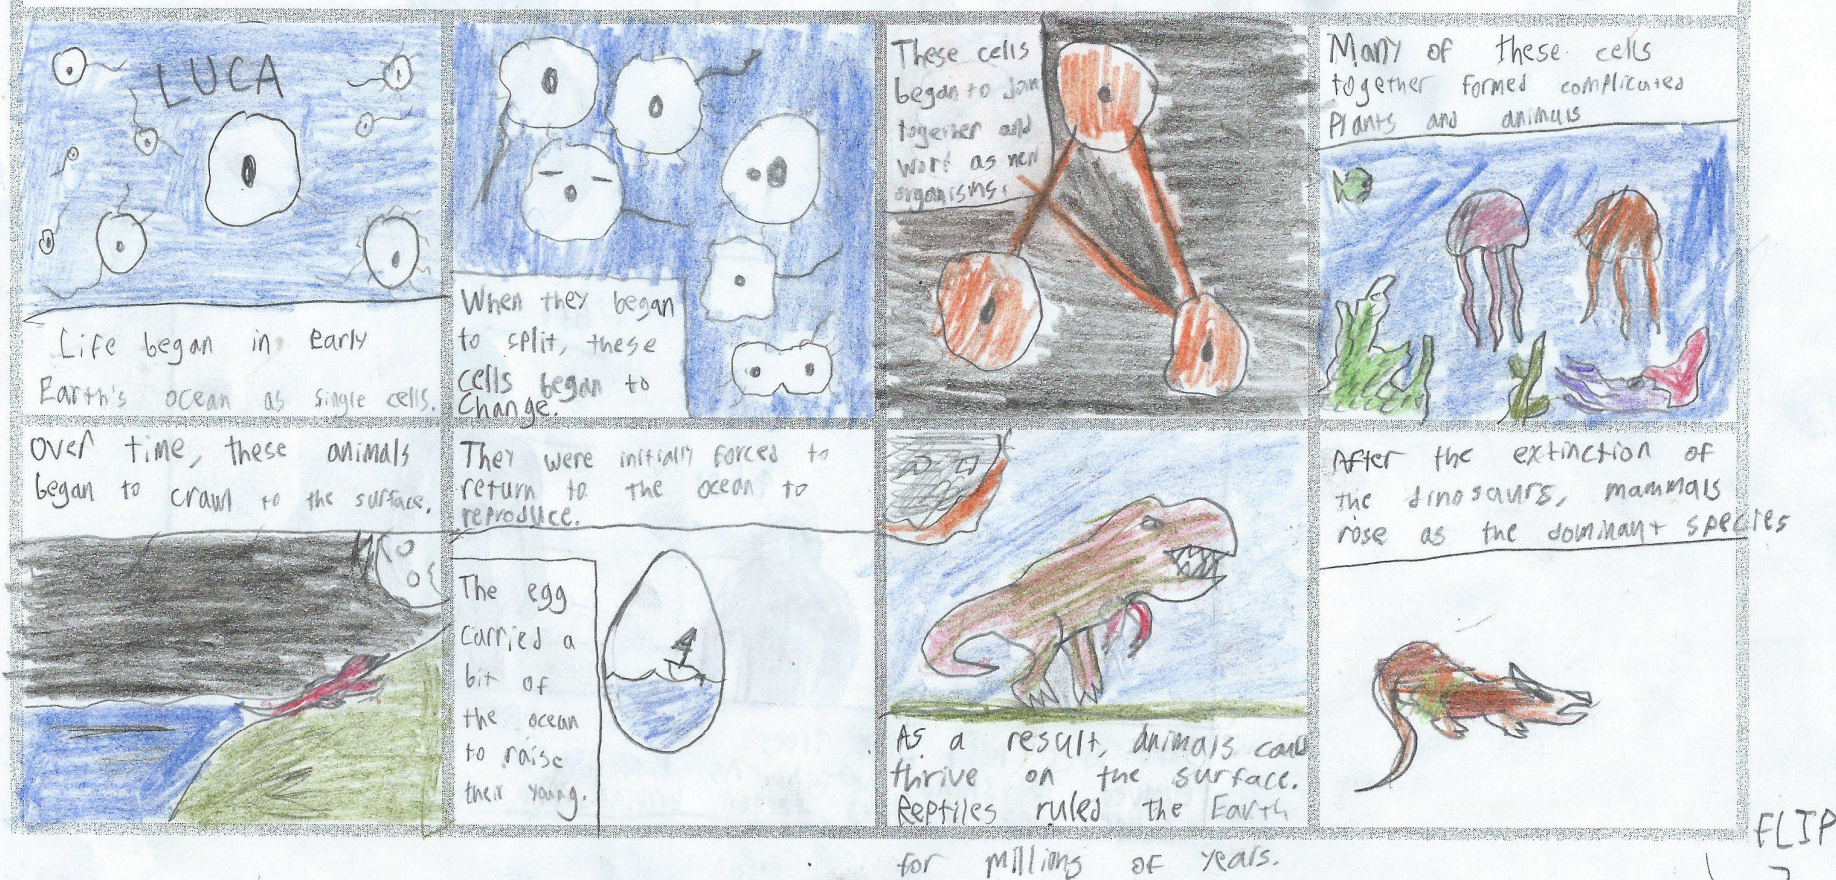

Directions: Create a comic strip that tells the story of evolution, from LUCA to Homo sapiens. Your comic needs to be at least five panels, but make it longer if you like. For each panel, draw or trace a picture, and include text that explains what's going on. Your comic doesn't have to be exact. Instead, focus on highlighting the major stages in human evolution and what the driving force for change has been. Be creative. Be as detailed as you like. And be sure to use the space provided at the bottom of each panel to provide a simple description of what's happening.

Your comic must include information about the seven evolutionary steps listed below:

- LUCA
- plants and animals
- primates
- apes (hominoids)
- great apes (hominids)
- bipedal primates (hominines)
- humans (Homo sapiens)

EVOLUTION

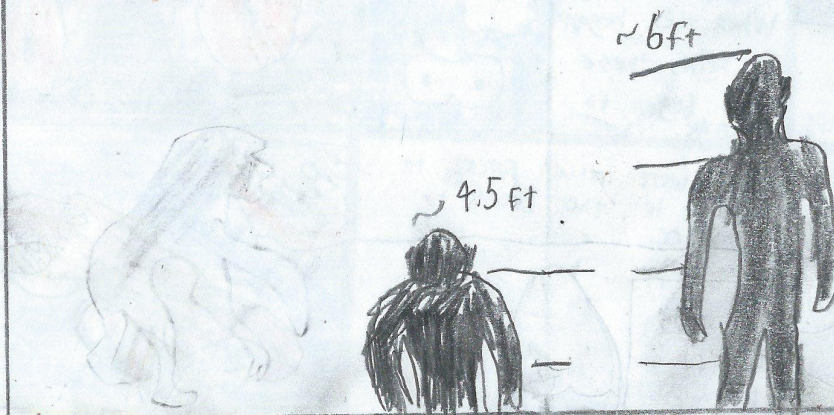

FLIP

One type of mammal is the primates. They have flexible limbs with hands that allow them to live in trees.

Apes are a kind of primate that have no tails, larger heads, and more flexible limbs.

Some apes left the trees. To see over the grass, they evolved to stand upright. As time went on, they grew taller and developed larger brains. The result is modern humans.
